

The Bearicuda® Admiral™ One Piece HDPE Unibody Advantage Over Hybrid Containers

100% Poly vs Hybrid

- 1 100% Plastic No Steel**
Our Admiral Line Does do not use the so called “Hybrid” Steel framing. Our container are 100% Plastic. The metal framing used by other companies does not solve the container rust issues. Our containers are 100% rust proof. One Piece HDPE Unibody Construction.
- 2 Low Noise Level**
Our Plastic containers are much quieter than steel dumpsters.
- 3 Anti-Sagging**
Our Containers have an anti-sagging structure built into the bottom. This prevents the bottom of the container from sagging. None of our competitors have feature in their design.
- 4 No Metal Pockets**
No need for pocket weld repairs or painting unlike Hybrid containers where the pockets are made of steel.
- 5 Quick Caster Change**
Casters are easy to install and change if replacement is needed in the field and containers requires no added assembly.
- 6 Serialization**
All Bearicuda® Containers are serialized for managing inventory and traceability.
- 7 Custom Labeling**
We can provide customer labeling whether it would be through a heat transfer label, decal label, or stencil.

- 8 Wall Thickness**
Heavy duty wall thickness, our containers have the thickest walls on the market. In some instances, our wall thickness is double our competitors.
- 9 ANSI**
Meets ANSI requirements and compatible with front or rear load lifting systems.
- 10 Trunnion Bar**
1.5” that uses a gusset as additional support.
- 11 UV Resistance**
UV resistance adds years of life to any kind of degradation and color fading from the sun.
- 12 Low Maintenance**
Dent and graffiti resistant, easy to clean.
- 13 Lid Lock Bars**
Lid Lock bars available in automatic and manual systems.
- 14 Custom Colors**
Choose the color that fits your image.
